Review of: "A Security Framework for the Mobile Application Using Color Barcode"

Ram Ratan

Potential competing interests: No potential competing interests to declare.

- Manuscript is written very poorly, it lacks clarity, highlighting the actual contributions, maintaining the connectivity, continuity and flow of text, and its organisation and layout.
- Authors should understand Barcodes/QR codes without confusion, and properly use the terms and technical details.
- Justification of using QR codes and advantages against other existing security frameworks should be discussed prior to presenting the proposed security framework.
- Proposed framework should be presented adequately with clarity, and security analysis should be presented to understand its outperformance.
- Figures should be of acceptable quality and readability. Moreover, all the figures/tables should also be cited in the text.
- References should be cited adequately for understanding related research and contributions.

Overall, the manuscript is poorly written, and the technical contributions are not appropriate for publication.
