Potential competing interests: No potential competing interests to declare.

The article has been carefully reviewed. It provides a brief summary of piezoelectric devices, with particular mention of Piezosurgery. The main cutting Piezosurgery features are briefly described by the authors without proper analysis of the mechanisms or adequate analysis of the biological mechanisms and processes underlying these characteristics. Important aspects such as heat production are not addressed. Furthermore, important applications of the piezoelectric device, such as the orthodontic application and the split crest, are not discussed. This article does not provide any further knowledge. This article does not provide any further knowledge beyond what is already known.
