The paper titled "Viewpoint: Strategic Insights and a Scoping Review of Telehealth Platforms and SWOT Analysis of Amazon's Clinical Endeavors" offers a thorough and timely examination of telehealth platforms, with a specific focus on Amazon's foray into the clinical domain. The research is particularly relevant given the current expansion and growing importance of telehealth services.

I commend the authors for conducting this study, as the topic is highly pertinent and the research approach is comprehensive. By providing a scoping review of telehealth platforms, the paper lays a foundational framework for understanding the current landscape of telehealth technology. This is an essential contribution, offering valuable strategic insights into a rapidly evolving field.

The inclusion of a SWOT analysis, although not particularly innovative, serves as an effective tool to evaluate Amazon's clinical endeavors. This analysis offers a structured approach to identify the strengths, weaknesses, opportunities, and threats associated with Amazon's entry into the healthcare sector. Such an evaluation is crucial for stakeholders and researchers who are exploring the potential impacts and strategic directions of major tech companies in healthcare.

Given that this paper presents preliminary results, I recommend accepting it with the understanding that it forms an initial framework for the scientific community. The insights provided here will undoubtedly stimulate further research and discussion, paving the way for more detailed and nuanced studies in the future.

I thank the authors for their valuable contribution and encourage them to continue their work in this critical area. Their efforts will help shape the understanding and development of telehealth platforms and the role of major tech companies in the healthcare industry.
