

# Review of: "[Mini Review Article] Practicality of Piezo Surgery in Periodontics"

Shashank Srivastava

**Potential competing interests:** No potential competing interests to declare.

The paper is well written, but certain clarifications are required.

1. Pls. explain ENDO and PERIO programs. If it's an abbreviation, then give the full form, else elaborate on it a little.
2. How have the authors come to the conclusion that the resonance tip will have linear movements only?
3. What is the mechanism by which piezo surgery differentiates between compact and porous bone?

Thanks and regards,
