

Review of: "Turning the Tables on Analysing Turns – Validation of Wearable Sensors in Ballet"

Aparna S. Murthy

Potential competing interests: No potential competing interests to declare.

Comments :

Abstract : Why 4th position? What are its kinematics?

Introduction: Have the specifics of center of mass/center of pressure been considered in the analysis ?

Aim: How have you handled the inclination aspects at different positions ?

Data analysis : This section should have the appropriate equations for the criteria for data collected to form the dataset.

Error of the Estimate (TEE) analysis : Again, provide the graph and mathematical equations as tools for analysis.

Discussion: There needs to be a discussion on inclination metrics along with comparing angle variations.
