Dear Authors,

The work done is okay. Some updates/suggestions are as follows:

1. Introduction can be better with more details and formulation of the research question in it. The last paragraph can present the organization of the work. Try to highlight the novelty by revolving the introduction around the research question with existing proof of work.
2. Try to maintain standard sections like Introduction, research method and case description, results, discussion, and conclusion. Mention limitations, assumptions, and future work in the manuscript.
3. Work done is okay, but the article needs to be restructured. This will enhance the overall quality of the work.
4. Try to add an abbreviation table for readability.
5. Check for errors, grammar, spelling, etc...
6. Check all equations properly.
