Potential competing interests: No potential competing interests to declare.

The manuscript, although it mentions a routine dosimetry procedure in radiotherapy clinics, is very important to profoundly think about and revise fundamental Linac dosimetry.

I have some comments as below:

- The title should be revised.
- The aim of the study should be extended. Why did the authors do this research?
- The novelty of the research is poor. I recommend that the authors gather and report several other radiotherapy centers' linac check data, and the manuscript will be enriched with a multi-central report.
- The authors should explain the fluctuation of the results and compare their results with other previous studies.
- The manuscript should be revised grammatically.
-
