The article titled Haematological and Biochemical Patterns in the Liver Function of a Syrup Made From Vitex Doniana Fruit has well-explained details of the pharmacological and histopathological study of Vitex doniana fruit. The article needs some clarifications, and the following modifications are suggested:

1. Abstract needs rewriting as it does not explain the rationale of the study
2. Introduction part does not include plant description and its constituents
3. The method of preparation of Vitex doniana fruit is not included in the methodology
4. Acute toxicity studies guidelines are not given and need rewriting
5. The whole manuscript needs a spell check and grammar correction
