I appreciate the authors for evaluating the toxicity of syrup prepared from *Vitex doniana*. A few suggestions are here to improve the manuscript:

1. In the title of the manuscript, write the scientific name of the plant properly. The species name should be in lowercase. Also, mention the authentication name of the worker after the species name.
2. In the manuscript, it is not clear about the syrup of the plant. Describe the method for the preparation of syrup in the Materials and Methods section of the manuscript.
3. Figures of histopathology are not clear. Revise the figures.
