Potential competing interests: No potential competing interests to declare.

In general, a new record is published based on the disjunct distribution of a species. *Henckelia Infundibuliformis* has been described from Tibet as an adjacent area of the state of Arunachal Pradesh. Phytogeographically, both fall in the same category. This is not proper to say as a new record. Since the species has extended its distribution towards India, it should be considered an addition to the flora of India.

Revised title: Note on the occurrence of *Henckelia Infundibuliformis* from Arunachal Pradesh.

Line 8: 33 species (Krishna et al., 2020)

Lines 9-11: Remove all other references.

Material and methods,

Line 1: Use authors instead of we.

Line 2: Remove several.

Line 2: Add s with specimen.

Line 4: Sirimongkol 2020: Find out that the present authors have consulted this thesis.

Line 4: Use "an addition" in place of "new record."

Line 4: Replace India with Indian flora.

Taxonomic treatment: Remove "Type to E000265053" and continue with the 3rd line, i.e., *Chrita*.

Add in "after WT Wang."

In the case of the 2nd last line, authors are advised to consult EFlora China FOC 18:344 as *Chirita infundbuliformis*.

Specimens examined: The altitude range is between 900-1700 m.

Notes:

WT Wang is not mentioned in the references.

China should be replaced by "Tibet, China."

Remove "first record" in the last line and replace it with 'addition to the flora of.'
