For authors (Suggestion or comment):

1. **Abstract:** Abstract should be in one paragraph.
2. **Introduction:** Please use the correct abbreviations, e.g., NO₂, SO₂. Check the format for citation style.
3. **Materials and methods:** This part needs a lot of improvement. The author needs to re-arrange the methodology explanation and make it short but complete. Suggestions: study area (include maps, etc.), sampling point location (include coordinates), sampling frequency and duration, selection of air quality parameters (also include standard methods and procedures), data collection, data analysis (e.g., statistical analysis, etc.), and air quality standard limit/permissible limit.
4. **Results and discussion:** This part needs a lot of improvement. The structure for writing results and discussion can be as follows: presenting results, interpretation of trends and results, discussion and argument, and supporting statements. The discussion needs support from other studies.
5. **Conclusion:** Please provide a heading for the conclusion. The discussion of the findings must be explained separately from the conclusion. The authors can include discussion under results and discussion, after presenting the results.
