It was a pleasure to review the article titled "Bibliometric analysis and current status of Leishmaniasis research indexed in Scopus, 2010-2023." The article analyzes how bibliographic information on leishmaniasis has been distributed worldwide. The importance of this study lies in analyzing which countries face the problem of leishmaniasis and which are following up with research to solve the problem. After reading the article, I was prompted to reflect on the need to encourage more participation from the countries most affected by the disease, as it is understood that developed countries that lack or do not have the disease are the ones that research it the most. I liked the analysis conducted by the authors.

Thank you very much.
