**Potential competing interests:** No potential competing interests to declare.

The authors have written a review focused on the effects of cinnamon on cancer prevention and progression. The use of natural compounds in the dietary prevention and treatment of neoplasms is a topic of increasing interest.

1. The chemical characteristics of the biologically active cinnamon compounds shall be summarized in a table added to Chapter 2.

2. A figure summarizing the effects of the biologically active cinnamon compounds described in Chapter 3 and showing what intracellular pathways are influenced by them shall be added to Chapter 3.

3. Additionally, it must be clearly stated that the use of cinnamon or its extracts is not an alternative for approved cancer treatment and could be only a supportive treatment.
