

Review of: "On n-Dimensional Maxwell and Dirac Equations in Curved Space-Time and Its Applications in SO(p,q) Group Theoretic Image Processing"

David Yaro

Potential competing interests: No potential competing interests to declare.

The manuscript might be accepted for publication subject to major review below:

1. The entire introduction needs to be reframed. There are no references in the introduction, and avoid the word WE because several works have been done in the area. The references in the introduction should be current (2015-2024).
2. Most of the equations/formulas in the manuscript are not punctuated (i.e., there is no comma, full stop, etc.).
3. State the motivation of the work.
4. Improve on the conclusion and abstract.
5. The references are sparse; get more references from the literature.
