Potential competing interests: No potential competing interests to declare.

The article presents a comprehensive framework for developing a curriculum to teach emergency physicians (EPs) the practical use of focused transesophageal echocardiography (TEE) for managing out-of-hospital cardiac arrests (OHCAs). The article is well-organized, methodically walking the reader through each step of the Kern model. This structure ensures that all critical aspects of curriculum development are covered, making it a valuable resource for educators in the medical field.

For improving the article, it is better to provide more detailed explanations and examples of how TEE improves patient outcomes in OHCAs
