**Potential competing interests:** No potential competing interests to declare.

The review article entitled 'Nanomaterials: History, Production, Properties, Applications, and Toxicities' requires further clarification on several aspects (kindly refer to the attached file for specific comments raised and to be addressed). The content of the manuscript does not really reflect the proposed title. Consider improving the content accordingly. The words NP and NM are not clearly differentiated/elaborated and thus may confuse the readers.

- Can you specify which sections of the manuscript should be expanded to better align with the title? - It is suggested that contents should have clear sections on the 1) history, 2) production, 3) properties, 4) applications, and 5) toxicities of NM.
- Could you provide examples or suggestions on how the differentiation between NP (nanoparticles) and NM (nanomaterials) can be clarified in the text? - It is suggested that the definitions of NP and NM are clearly stated in the introduction section.
