

# Review of: "[Perspective] AI Is All About Typing the Right Phrase"

Amit Verma

**Potential competing interests:** No potential competing interests to declare.

The ideas in the article seem disconnected and do not flow in a cohesive manner. The title of the article states AI is about typing the right phrase, which seems to be derived from the current spike in ChatGPT and other Generative AI-based use cases, but the author does not address that.

Prompt Engineering is definitely part of GenAI models such as GPT-3, GPT-4, but AI as a field goes beyond LLM models.

Section 2 of the article talks about AI in earth science but fails to address the reason for the section. Is it to highlight the usage of AI and ML in different subject areas, and if yes, why did the author choose this area over other areas?

The author mentions 3 practical steps in section 4.3 but they are not comprehensive. Furthermore, the word AI in the article seems to imply a Generative AI as opposed to generic AI or deep learning models.
