Potential competing interests: No potential competing interests to declare.

This review covers history, production, properties, applications, and toxicities of nanomaterials. The topic is of general interest. There are several issues to be considered before recommending publication. The authors must consider the following points and provide a revised version that addresses satisfactorily the above and following points.

1. The manuscript may seem anticlimactic. If the title is kept, the content should be improved.
2. There are few literatures in the recently three years. The latest research works should be involved and discussed.
3. The future perspective or outlook should be further discussed, especially the opportunities and challenges of nanomaterials.
4. Some important images should be added. It helps to read and understand the content of the manuscript.
