Potential competing interests: No potential competing interests to declare.

The publication looks more like an extended measurement report.

It would be important to accurately identify the measuring instruments used (limitations, measurement limits, accuracy...).

I would like to see a map of how the measurement points are located. What are the terrain conditions? What is the prevailing wind direction? Are there industrial facilities in the area that intensify pollution?

There are no units in the tables! There are no axis labels on the diagrams! These must be replaced immediately!

I don't even understand Figures 1 and 2. What exactly is on them?

The reference list is not formally homogeneous!

The publication requires thorough revision!
