Potential competing interests: No potential competing interests to declare.

The article addresses a crucial aspect of radiotherapy, namely quality control of linear accelerators via daily quality assurance using the PTW QUICKCHECK device. This is a very relevant topic in medical physics and oncology.

I have carefully reviewed the article. Unfortunately, I cannot accept this article for publication due to quality issues:

- The article only presents results found without any discussion
- The article does not present any analysis of the data found and does not present any scientific discussion of the results
- No comparison is made with other devices of the same type.
- The figures must be numbered
- English needs improvement
