Potential competing interests: No potential competing interests to declare.

1. The abstract does not specify which specific fuzzy algorithms are used for image processing, which leaves the reader without a clear understanding of the technological framework or methodology. Detailing the types of fuzzy algorithms applied could enhance the credibility and replicability of the research.

2. While the abstract mentions the development of a Graphical User Interface (GUI), it lacks detail on the user experience and functionality of the GUI. More information on how the GUI facilitates the interaction between the fuzzy algorithms and the end-users (farmers) would provide a clearer picture of its practical application and ease of use.

3. Language requires thorough editing.

4. The equations almost all lack proper referencing!
