**Potential competing interests:** No potential competing interests to declare.

The manuscript titled "A Review of the Risks of Copper Foil Manufacturing Plants: A New Facility in Catalonia, Spain," submitted by Jose L. Domingo, is comprehensive and well-articulated. However, I have a few comments and suggestions to further improve its clarity and readability:

1. Include a graphical abstract, which will enhance the article's visibility within the scientific community.
2. Expand the introduction to include reasons for the expected increase in demand for electrofoil, such as the rise in electric vehicle production and advancements in battery technology.
3. Create a comprehensive comparison table that differentiates the current study from previously reported literature.
4. There are minor grammatical errors and awkward phrasings that need correction for better readability.

Overall, I recommend acceptance after the revision.
