Potential competing interests: No potential competing interests to declare.

The authors have done a great job, despite not having funding for the most recent studies, but it is noted that they are committed to informing the scientific community and the population of the risk that the population of Sant Adria de los Besos, Catalonia, Spain, may suffer from the Municipal Solid Waste Incinerator in this city. I don't see the need to correct something; I only found a typo when they indicate "ng," with a capital N.
