Potential competing interests: No potential competing interests to declare.

The reading of the research was somewhat difficult; there is a lot of redundancy in the information. A thorough revision of the writing is necessary.

The text begins by discussing medical data, but no experiment was conducted using a dataset in the healthcare field.

I find it interesting to emphasize pre-processing, highlighting its importance, and a comparison of machine learning algorithms for text classification. However, in my view, no new development in the field has been made.
