Bisphosphonate-Associated Osteonecrosis of the Jaw: Report of a Task Force of the American Society for Bone and Mineral Research. *J Bone Miner Res*, vol. 22 (10), 1479-1491. doi:10.1359/jbmr.0707onj.

Bisphosphonate-associated ONJ was defined as an area of exposed bone in the maxillofacial region that did not heal within 8 wk after identification by a health care provider, in a patient who was receiving or had been exposed to a bisphosphonate and had not had radiation therapy to the craniofacial region.
