Potential competing interests: No potential competing interests to declare.

The manuscript deals with an interesting topic. Urban Green Infrastructure is an important opportunity to face climate change, and city planning must integrate it as a key principle.

The manuscript is well written. In general, some important references are missing, and factors of the model should be better justified. The introduction must be rewritten to improve the structure of the text because there is a lot of repetitive text.

In the attachment, I give you the annotated PDF with comments.

I recommend a minor revision correcting the text basically.

I hope it will be useful.
