The article entitled "**Evaluation of Chemical Content and Phytochemical Composition of Yemeni Almond Cultivars**" contains some key points to improve your article.

- In the title "Study Area and Sample Resources," write either "plant" or "tree"... Delete the word "one."
- In the title "Almond Seeds Samples Collection and Preparation," rewrite the sentence; you have repeated the sentences.
- Which technique did you use for the determination of minerals like Al, Zn, Cu, B, Mn, etc?
- If you used a spectrophotometer, how did you conduct the analysis? Did you prepare a calibration curve or not?
- Authors should conduct fatty acid analysis on almond oil using GC-FID.
- You should add all the equipment details like make and model used during your study.
- Did you extract oil from almonds, or did you use your sample as a whole? If yes, then how did you extract oil from almonds?
