The topic selected Therapeutic Potential and Pharmaceutical Impact of Shilajit (Asphaltum punjabianam): Current Research and Future Prospects is quite interesting. The abstract given must contain at least 250-300 words. Asphaltum punjabianum is a mineral-based crude drug rather than a phytomedicine. The literature review and medicinal uses described in this manuscript are quite interesting and significant. The manuscript presented is based on reviewed literature. Modern and novel research activities of Asphaltum punjabianam, such as analgesic, phytochemical, and antimicrobial, are not mentioned properly. Almost all research cited and references given are outdated. The author is requested to include recent references, i.e., after 2020. The paper will provide a good baseline for further research on the same crude drug.

Thanks & Regards

Dr. Muhammad Ibrahim
