Potential competing interests: No potential competing interests to declare.

The manuscript reported a study of PCDD/F emissions by the municipal solid waste incinerator in Catalonia, Spain. The results provide interesting information on PCDD/F emissions around the incinerator. Essentially, I have some comments regarding the manuscript.

1. This manuscript is likely a scientific report. The manuscript should be formatted as a scientific article.
2. The manuscript needs to emphasize the aim of the study better.
3. Please provide the research methodology.
4. Could the authors please clarify the effect of the composition of municipal wastes and incineration temperature on PCDD/F emissions?
5. Please add an axis label to Figure 2.
6. Could the authors clarify what influences the variation of PCDD/Fs over time (municipal waste capacity, composition, facility, etc.)
7. Please clarify the reason for the differences between levels of PCDD/Fs in soil and air samples in 2014 and 2017.
