

# Review of: "The Effects of Polypropylene Wastes on the Compressive Strength of Grade 25 Concrete"

Ramappa Prabhakara

Potential competing interests: No potential competing interests to declare.

Title - OK

Abstract - To cover comprehensive information regarding the scope of research work, methodology followed, and outcome of research work

Review - Insufficient

Research Gap - Generally, research gaps are identified by listing the findings from the literature review

Objectives - The moderated research gaps based on the available materials, machinery, project period, which are achievable, are called objectives

Methodology - OK

Results - Detailed analysis of test results, discussions on the deviation of results from the control specimens, and comparison (benchmarking) of the values obtained from the present research work to the available literature need to be included

Conclusions - Appears to be observations rather than conclusions

Outcome and Society - Social relevance needs to be justified

Recommendations - Author is advised to incorporate all of the above and resubmit the paper
