Recommendations for the study titled "An Intelligent Analytics for People Detection Using Deep Learning" are as follows:

1. Language of the written article is poor. Please recheck it carefully.

If possible, send the paper for proofreading.

2. In the abstract section, a few sentences about the novel parts of the proposed method and their contributions should be added.

3. State the novelty of your work and its contribution to science in clearer sentences.

Highlight your analysis and reflect only the important points for the whole paper.

4. The article's references are not sufficient.

Some studies on machine learning algorithms and deep learning models, just to find help:
