Dear Author

The paper is interesting. However, you need to revise the paper substantially as follows:

1. The research question is not clear in your introduction.
2. Language is not appropriate in many parts of the article.
3. Please start your methodology part with 'Materials and Methods'.
4. There are no references in your 'Methods and Data Analysis' (or: There are no references in your 'Methods and Data Analysis' section).
5. You didn't write anything about the handling and processing of the remote sensing data in your methodology.
6. The captions of the tables and figures should be self-explanatory.
7. In Table 3, you put NDWI in the equation. You didn't write anything about NDWI in your methodology. Is it your mistake? Please check it out. Where is NDVI?
8. The conclusion should be updated using your own results.
