

## Review of: "Evaluation of Antioxidant Activity and $\alpha$ -Amylase Inhibitory Potential of Melilotus indicus Ethanolic Extract: An In Vitro and In Silico Study"

## Khaled Abdelhady

Potential competing interests: No potential competing interests to declare.

The authors are dealt with the article entitled Evaluation of Antioxidant Activity and  $\alpha$ -Amylase Inhibitory Potential of *Melilotus indicus* Ethanolic Extract: An In Vitro and In Silico Study

## Comments

- 1. The literature survey is incomplete and must include the chemical constituents, especially phenolics and flavonoids.
- 2. The drying of the ethanolic extract is not suitable for biological studies; a rotary evaporator or lyophilization must be used for drying.
- 3. There is no tool of analysis to prove the presence of the studied compounds, at least GC/MS, LCMS, or HPLC.
