The paper content is very interesting. However, there are a few suggestions for improvement:

1. To include the operational framework figure and explanation. Since this is a technical paper, each step-by-step process needs to be explained. The research framework is not well presented; the process flow is very simple.
2. Is Figure 3 the results of LGAN or GAN?
3. It is better if the results can be compared to other techniques. Was any comparison made for this study? What if compared to GAN? Will it be better or the same? If no, maybe it can be put as future work.
4. The conclusion must pinpoint the objective of the study.
