Potential competing interests: No potential competing interests to declare.

The article "Understanding Measles Virus at 70 Years: From Cellular Mechanisms to Immunisation 1954-2024," authored by Brent Brown, Ingo Fricke, Chinua Imarogbe, Jan Sheringham, and Enrique Chacon-Cruz, offers a thorough review of the progress made in understanding the measles virus over the past seven decades. The discussion section of this article plays a crucial role in evaluating the significance of the reviewed research. It not only synthesizes decades of scientific inquiry into measles but also contextualizes these findings within current global health strategies.

Key strengths of the discussion include:

Historical Context and Evolution: The discussion provides a clear historical context, tracing how our understanding of measles has evolved.

The discussion section offers valuable insights into how historical research can inform and enhance global health strategies.
