

# Review of: "Nanomaterials: History, Production, Properties, Applications, and Toxicities"

Marlene Velazco-Medel

**Potential competing interests:** No potential competing interests to declare.

The book or chapter [Nanomaterials: History, Production, Properties, Applications, and Toxicities](#) is a document that covers several aspects of the field; nevertheless, it is similar to others in the field.

I would include recent advances in each subtitle and a comparative analysis between what was done years ago and what is being done now; additionally, I recommend making connections between the topics.
