Potential competing interests: No potential competing interests to declare.

The topic is remarkable and interesting, but the paper is still not ready to be accepted due to many reasons:

1. It does not clearly show your innovations and contributions. Please highlight your innovations.
2. The title is not attractive and should be reconsidered.
3. The writing of the paper needs improvements in terms of grammar, spelling, and presentation. The whole text should be carefully examined and corrected. Lots of language errors.
4. What are the limitations of the model?
5. The conclusion part needs to be strengthened.
6. A literature gap should be given.
7. High-quality figures are suggested.
8. Provide more interpretation and analysis of the results, rather than just describing the findings. Put the findings in context and offer more insights.
9. Some papers can be discussed. For example:
