This is nice research work. However, the author should make the following minor changes:

1. Title: Please put the authority of the plant after the name of the plant.
2. Do the same in the abstract. Reduce the abstract to about 250 words if possible. For example, include a brief background, aim, methods, results (main findings), and conclusions.
3. State clearly the voucher number of the plant in the section plant collection.
4. Mention the statistical tool used in the section statistical analysis, e.g., one-way ANOVA, and the post hoc test used.
