**Potential competing interests:** No potential competing interests to declare.

Thank you for this opportunity. The article looks fine to me. It will help readers to go through the situation and the way forward to tackle it. However, it should clearly mention how we can implement the intervention. It should better discuss the interventions and their results for replication or use. Only identification of problems will not provide the solution. I would strongly suggest authors to think of it and discuss the best solutions/interventions that prevent mental health conditions. Thank you.
