Potential competing interests: No potential competing interests to declare.

Dear authors, after reading the article, I recommend modifying:

ABSTRACT – to provide information about all performed tests (some information is missing).

MATERIALS and METHODS – description of individual tests is insufficient/figure documentation is missing (samples before and after tests)/comparison with the results of previous research is missing, too.

CONCLUSION – presented conclusions should be clarified.

FINAL RECOMMENDATION: The article can be accepted after revision.

Yours sincerely,

Assoc. prof. Zuzana Mitaľová
