

Review of: "Exploration of Quartz, Feldspar, and Mica Minerals Using Geophysical Resistivity, Self-Potential, and Natural Electrical Field Techniques"

Julián Ramos

Potential competing interests: No potential competing interests to declare.

It would be interesting to add a map with the location of the study area. Can you provide specific examples or suggestions on what additional information should be included in Section 2.1's geological map and stratigraphic column? Could you clarify what aspects of the equipment and measurement techniques used in Section 3 should be detailed further to enhance the understanding of the exploration methods? The results chapter should be explained in greater detail by adding complementary information about outcrops or rock samples. It is recommended to rephrase the work and resubmit it for a new review.
