Potential competing interests: No potential competing interests to declare.

- The overall advantage(s) of the proposed methodology [fuzzy intelligent algorithm], when compared to the disadvantages of the literature discussed, could have been listed at the end of the literature survey.
- The methodology [fuzzy intelligent algorithm] could have been clearly introduced at the beginning of the methodology section.
- How many images were captured and what accuracy rate this methodology gave should have been included.
- A comparison of this method with the other latest methods available could have been included and tabulated under results and discussions in terms of accuracy rate and execution speed.
