

Review of: "Feature Selection and Classification of Type II Diabetes on High Dimensional Dataset"

Birmohan Singh

Potential competing interests: No potential competing interests to declare.

The authors have worked on the feature selection and classification of the type II dataset. There are some concerns about this paper:

1. What the exact novelty of the paper is is not clear.
2. Which feature selection method is used in this work is confusing when going through the paper.
3. Why the selected classifiers are chosen for this work is missing.
4. Whether the parameters are optimized or the authors have used the default parameters is not mentioned.
5. What preprocessing methods are taken into consideration to deal with the problem of class imbalance is not mentioned.
6. What normalization method is used in the work is not mentioned. If the work does not require any normalization method, it should be mentioned.
