Hi

Thank you for permission to review this systematic review

This valuable study has many innovations. My comments are aimed at improving the work. First, this study appears to be a scoping review study. If the study is systematic review, it is better to register the PROSPERO code for it. It is better to use the PRISMA 2020 guideline for designing and reporting the article. Also, the introduction should be shorter and the importance of the topic should be shown more. In the selection of the study, it is better to use two authors independently instead of one reviewer. Also I recommend to change the existential dimension to spiritual dimension.

good luck
