

Review of: "Modified free energy generation using permanent Neodymium Magnet based on Bedini with Maxwell and Lorenz gauge conditions"

Arunkumar Jayakumar

Potential competing interests: No potential competing interests to declare.

The manuscript is well drafted; however, it needs a few critical changes.

1-The statement "Over time, the demand for electricity is expected to be amplified at a triple rate compared to today." needs a reference.

2-The author needs to emphasize the contribution pertaining to "vacuum energy into mechanical energy."

3-In table 3, is P_{in} a power or energy value? What about P_{out} ?

4-Kindly check equations 7 and 8.

5- Make a comprehensive proofreading. More references can be added, especially inline to the Tesla free energy claim.
