The English of this manuscript is very difficult to read and understand. The Introduction section was not clear; the author kept repeating himself and wrote a lot of irrelevant information. There is a lack of motivation in the introduction. The Related Work section also included a lot of irrelevant information, making the purpose of this manuscript unclear. The author kept talking about text classification, whereas he used a tabular dataset for the analysis. This is confusing. Using Bi-LSTM and LSTM networks for text classification has been done for a decade, so there is no innovation in this manuscript.
