Potential competing interests: No potential competing interests to declare.

Make sure the abstract captures the essence of the study without delving too deeply into detailed descriptions that belong in the main body of the paper.

Clearly state the problem or the gap in the current research that your study aims to address.

Highlight the main findings, specifically the impact of processing parameters on the friction stir processing (FSP) of AZ91 and the magnesium alloy reinforced with MoS₂.

Briefly mention the innovative aspect of the methodology, such as the hole technique.
