**Dear authors,**

The prepared manuscript **number Qeios ID: A2W8XT, Type: Article**, with the title "**Evaluation of Chemical Content and Phytochemical Composition of Yemeni Almond Cultivars**,"

**Recommendation:** ACCEPT WITH MODIFICATION

1. This article can be considered a short article depending on the quantity of information discussed.
2. The title and the abstract are perfect.
3. In the introduction part, please justify the source of the information:.....as the amount of production worldwide reached 1.2 million tons in 2017.
4. Qat???
5. It is true that the originality of the scientific research in this article is the importance of Yemeni almonds compared to others, through a comparison by chemical analysis. But why not continue with other analyses and applications such as antioxidant activity by DPPH, ABTS, FRAP, and also an antibacterial analysis.
6. In the article, please talk about the nature of the soil, climate of the zone, and regions of the cultivars of Yemeni almonds.
7. If you can add images of the Yemeni almond trees of the nine varieties, that would be beneficial.
8. In general, the materials and methods, results and discussion parts, the sub-paragraphs, and the conclusion are calibrated and well written, with a lack of perspectives in the conclusion part.

**Best regards,**
