

# Review of: "Recycling of waste bamboo (*Bambusa Vulgaris*) into value-added platform chemicals: Bioethanol and Bioethylene"

Mahyuni Harahap

**Potential competing interests:** No potential competing interests to declare.

The article is interesting because it provides a significant contribution to utilising bamboo waste in value-added products. It could have a positive impact on industries. However, authors should address the following to improve this publication:

1. The abstract should be no more than 250 words and should provide detailed suggestions, with examples, for writing the background, methods, results, and conclusion.
2. The keywords must be unique words, excluding the title.
3. The introduction is very poor; it should provide the gap in research and the novelty of this work. The literature review should be written either for a thesis or for a dissertation.
4. The quality of the pictures is very poor.
5. Results and discussion should be compared with previous works/literature.
6. Conclusions must be improved and mention suggestions for future work.
