Thank you for the chance to review this paper. It is a very useful study highlighting various important aspects of rotavirus disease and vaccine. Below are a few suggestions from my end for improving the manuscript before publication:

1. The authors have provided earlier data related to rotavirus prevalence and deaths in the abstract and introduction. Please provide the latest updated data.
2. Please explain if knowledge and attitude were graded (e.g., good or poor). If yes, describe the details in the methodology.
3. "Conclusions" are missing in the abstract. Kindly add that too.
